# Top 10 Sales Per Album

Top 10 Sales per album

Minha Historia looks to be the best-selling album in the store at the head of this chart, which lists the top ten best-selling albums in the establishment. And if we examine the album sales from a comparative perspective, they are excellent because the first three albums' sales have converged, which illustrates how frequently all albums satisfy consumer need while differing in terms of the customer's preference

The Average Spent of City Per Customer

The Average Spent of City Per Customer
According to the top ten cities for sales, we estimated the average amount each of our customers spends on our items. Here, the initial cities show up in proportions that are roughly between 6.80 and 6.40, which is fine but might use improvement. However, the negative perspective is that sales fell to roughly 6.10 following the city of Paraguay, reflecting disappointing sales. Here, we might need to instruct the marketing team to develop a clear strategy focused at increasing spending to the minimum of the top three.

Total Sales performancee per Employee

Total Invoice per Employee
The identical performance ratios of the employees in the sales results shown in this chart are a great sign of employee convergence, and they range from roughly 31% of total sales.

Number of Sales Per MediaType According To Cities

Number of sales per mediatype of cities
According to this chart, which demonstrates the dominance of the MPEG format in 90% of total sales, this chart shows us the most popular and best-selling media type among consumers by cities. This format should be the only one used by the music detector, and other formats should be eliminated to lower costs.
